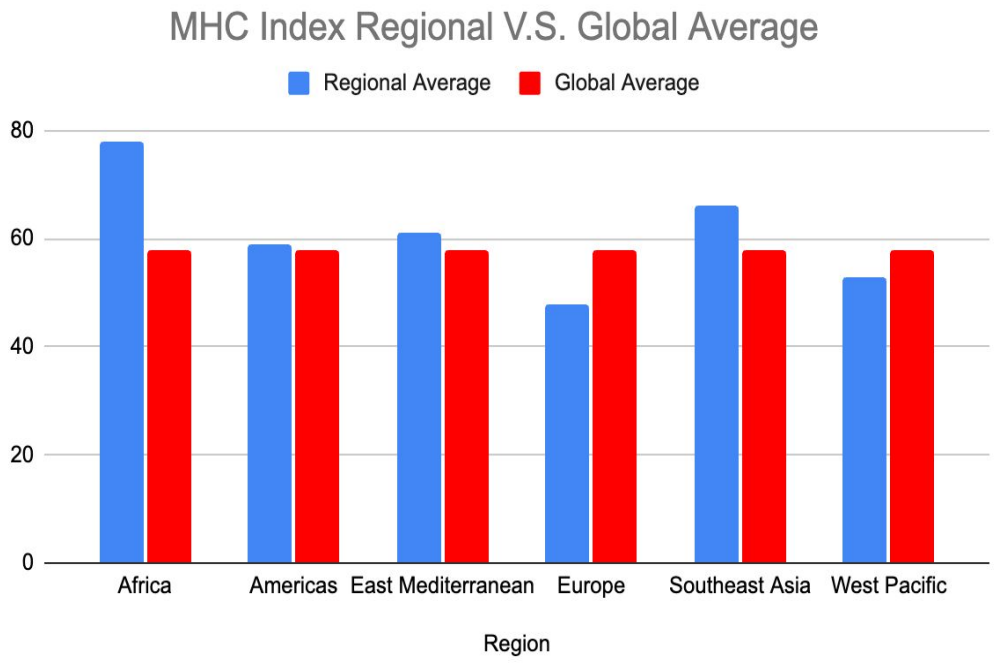
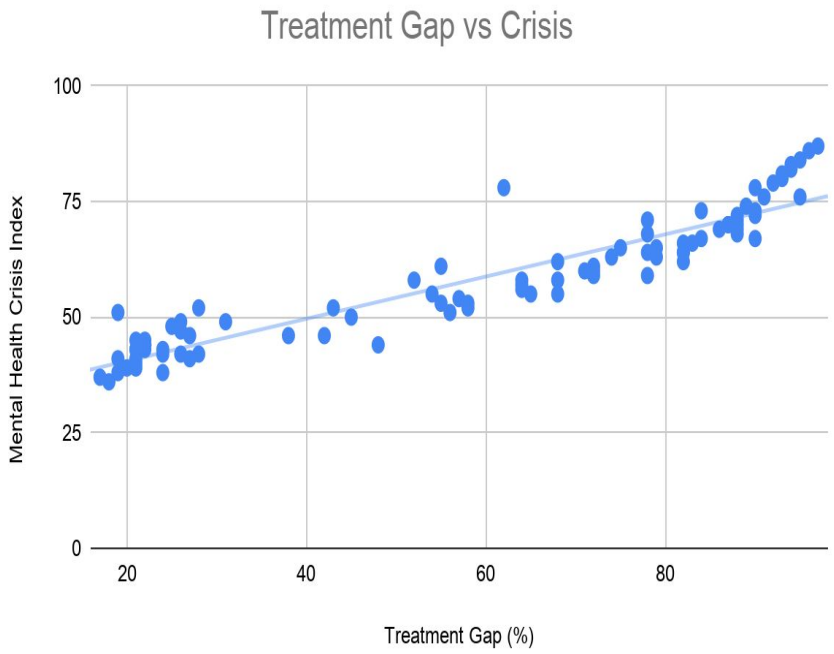
Global Mental Health Analysis

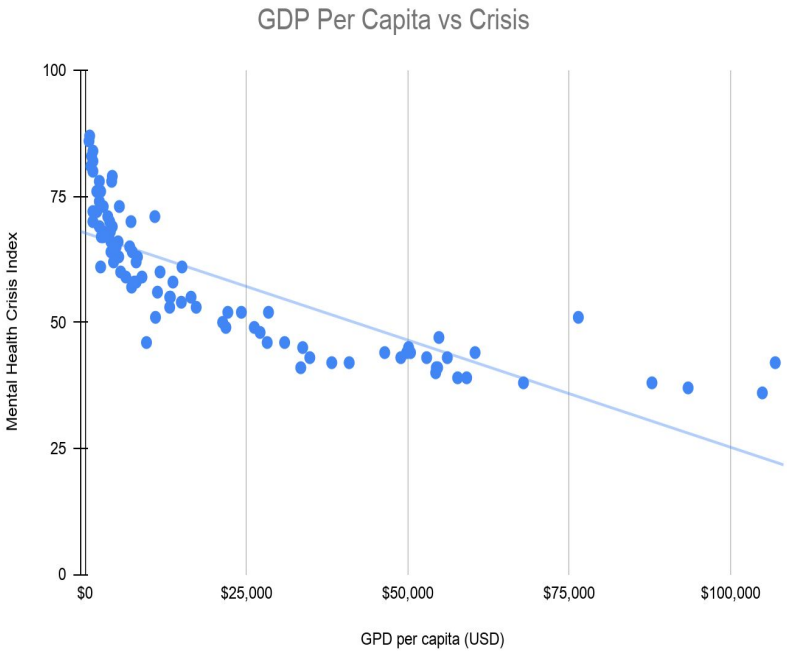
Identifying areas most in need of investment based on treatment access, economic resources and crisis severity

Mental Health Severity By Region

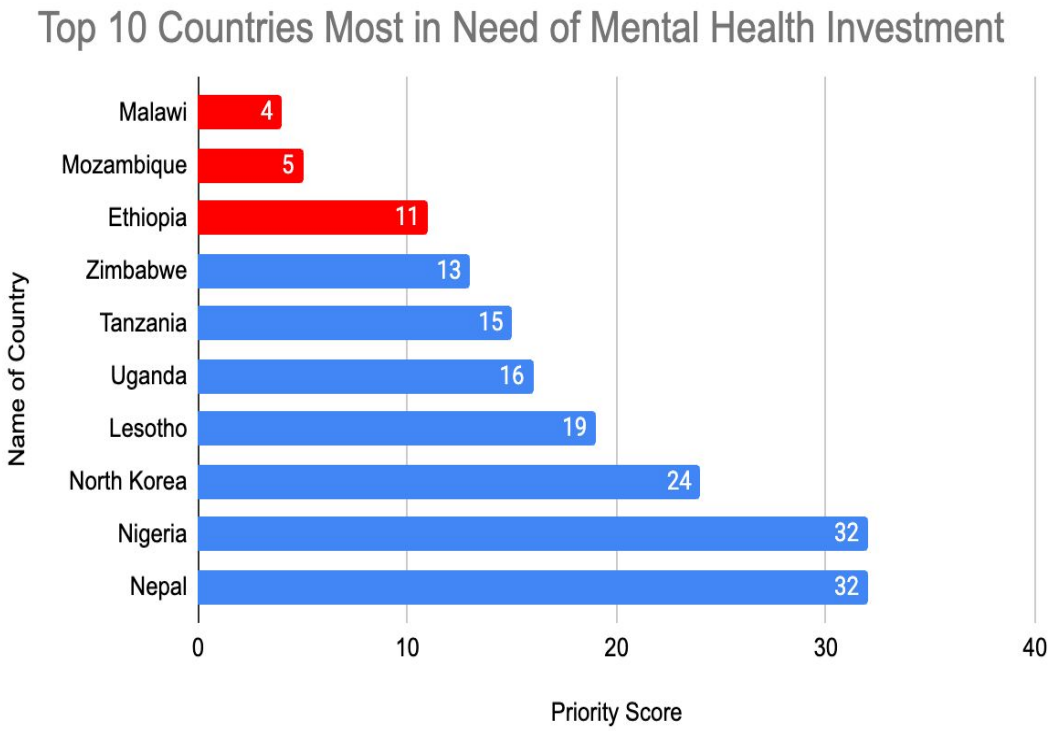


Higher Treatment Gaps and Lower GDP are associated with Higher Crisis Severity





Top 10 Countries Most in Need of Mental Health Investment



Key Insights

- High crisis severity is strongly associated with high treatment gaps and low GDP
- Economic resources (GDP) play a significant role in addressing mental health
- Psychiatrist availability does not alone explain the mental health crisis
- High-priority countries are concentrated in low-income regions of the world

Recommendations

- Prioritize investment in countries which have high treatment gaps and low GDP
- Focus on improving access to healthcare, not just increasing the workforce.
- Allocate funds toward infrastructure and treatment accesability
